Abstract (en)

[origin: WO2015021341A1] The present invention relates to methods and systems for generating dynamic user interfaces on electronic devices where the dynamic user interface displays output of one or more applications that are running in a remote server. In one preferred embodiment, the one or more applications are operated by robots. In another preferred embodiment, the one or more applications are coupled to client devices, including hardware devices of the client devices, as to allow robust user interaction with the one or more applications remotely from the electronic device.
