Abstract (en)

[origin: EP2819078A1] The invention relates to a method 20 for accessing a contact-less service. According to the invention, a device 14 accesses at least one contact-less application. The method comprises the following steps. The device determines 24 information relating to a location where the device is currently situated. The device retrieves at least one contact-less application 216 that is associated with the device location information and/or at least one contact-less application that is not associated with the device location information. And the device activates the at least one contact-less application that is associated with the device location information and/or the device deactivates the at least one contact-less application that is not associated with the device location information. The invention also relates to corresponding device and system.
