Abstract (en)
A filter for a cigarette that is connected through tipping paper at one end of a rod unit in which tobacco shreds are wrapped in cigarette paper, the filter includes a throttle member that has a throttle member main body arranged so as to cover the lateral cross-section of the filter, and a through-passage which is formed through a part of the throttle member main body in the longitudinal direction of the filter and through which mainstream smoke flows, a rear-stage filter material that is disposed in the rear stage of the throttle member and filters the smoke components of mainstream smoke, and a turning mechanism that allows a relative turn of the rear-stage filter material and the throttle member around the longitudinal axis of the filter. The through-passage of the throttle member is formed so that the position at which the through-passage faces the front end face of the rear-stage filter material is changed according to the relative turn of the rear-stage filter material and the throttle member.
