Abstract (en)  
The invention relates to a chair (100) having a vertically adjustably seat, said chair in the orientation intended for use comprises: - a first side panel (4) and a second side panel (6), said first side panel and said second side panel being vertically arranged; - a seat support (8) having a top side (10) and a bottom side (12); and - a seat (2) having a top side (14) and a bottom side (16); wherein said first side panel comprises two or more through-going holes (18a,18b,18c,18d,18e,18f), said through-going holes being oblong in a horizontal direction; and wherein said two or more through-going holes being vertically displaced; wherein said second side panel comprises two or more through-going holes (18a',18b',18c',18d',18e',18f), said through-going holes being oblong in a horizontal direction; and wherein said through-going holes being vertically displaced; wherein the height of location of each through-going holes (18a,18b,18c,18d,18e,18f) of said first side panel (4) corresponds to the height of location of a through-going holes (18a',18b',18c',18d',18e',18f) of said second side panel (6); wherein said seat support (8) is having dimensions which allows said seat support to be inserted and accommodated into one of the through-going holes (18a,18b,18c,18d,18e,18f) in said first side panel as well as into one of the through-going holes (18a',18b',18c',18d',18e',18f) in said second side panel in such a way that said seat support rests in said through-going holes; wherein said seat support is comprising a first set of locking means (20) and wherein said seat is comprising a second set of locking means (22); said first set of locking means (20) and said second set of locking means (22) being adapted to be engaged into each other; thereby allowing locking of said seat (2) between said first side panel (4) and said second side panel (6).
