Abstract (en)

[origin: EP3015637A1] The invention concerns a screening device (13) for a roof window (1) the screening device comprising a top element (14) and two side rails (17, 18), the two side rails each having a longitudinal slot (172, 182), a screening body (22) having mutually opposite side sections guided in the longitudinal slots, the two side rails further comprising a guide channel (171, 181) for at least one gliding bracket (23, 24) which is adapted for being mounted at or on a bottom part of the sash of the window, the screening device (13) further comprising a bracket system for mounting the top element of the screening device on the roof window. The bracket system comprises two mounting brackets (50), each with a first bracket part (51) and a second bracket part (52), the first bracket part comprising a section (511) for mounting the first bracket part on the roof window and means (518) for being connected to corresponding means (528) of the second bracket part, the second bracket part (52) comprises an element (521) for attachment to the side rail and a reception element (530) for reception of a corresponding reception element (141, 142) of the top element (14). The invention further concerns a method for mounting such a screening device (13) on a roof window (1).
