Abstract (en)

[origin: DE102013212927B3] The buckle has a latch mechanism (3) that is arranged in housing. A spring loading element (13) is provided in the closure direction of the latch mechanism. A damping element is acted against the closure direction of the latch mechanism. The damping element is arranged on the inner side of the housing to an expected impact surface of the components of the latch mechanism during processing or unlocking movement, such that soft layer is formed.
