Abstract (en)  
[origin: WO2015001203A1] The invention concerns a set of parts 10, 20 comprising a first series and a second series of parts, the parts of the two series having similar bodies but differing in terms of colour. A fastening means 11 is attached to the body of each part of the first series, a connection means 21 is attached to the body of each part of the second series, the connection means being different from the fastening means, the fastening means and the connection means engaging to secure the parts on which they are provided. The set is remarkable in that the parts of the first series are free of connection means and in that the parts of the second series are free of fastening means.
