Abstract (en)

[origin: WO2015001217A1] The invention relates to a method for producing a fixing tab (2) formed in a sheet of metal (4), said sheet of metal (4) being intended to run along a succession of presses (3) so as to form components (5) by way of a succession of cutting and stamping steps, the fixing tab (2) forming a temporary connection, on at least a portion of the sheet of metal (4), between a first, thinned part (43) of said portion that forms a linear strip that is substantially aligned in the running direction of the sheet of metal (4), and at least one component (41, 42) which is being formed and is formed in a second part of said portion. The invention also relates to a sheet of metal (4) comprising a fixing tab (2) that can be produced by means of such a production method.
