Abstract (en)

[origin: WO2015001580A1] A postal envelope for containing one or more objects with two-dimensional development, such as for example a ticket, a credit card, a CD/DVD, envisages that: said postal envelope is formed starting from a sheet, (1) provided with two flaps (2, 3) that fold on the sheet like a book, of which the first flap (2) forms a pocket designed to receive the two-dimensional object, while the second flap (3) comes to cover the remaining uncovered part (4) of the sheet; said first flap (2) is glued to the sheet (1) at its three free sides so as to prevent the two-dimensional object (B) itself from coming out, either from the long side or from the short sides; in order to be able to take the two-dimensional object (B) out of the envelope the first flap (2) has, at a short distance from its area (A) of the long side glued on the sheet, a tear-away strip (6), the length of which is commensurate with that of the two-dimensional object (B) contained in the pocket and which is shaped so that, by being removed, it will define a slit (5) through which the two-dimensional object (B) contained in the envelope can be easily taken out.
