Abstract (en)

[origin: WO2015000458A1] The invention relates to a door lock or flap lock comprising a locking mechanism that has a rotary latch and a pawl for locking the rotary latch. Said type of lock is also described in DE 103 20 457 A1. The invention also relates to a method for producing a plurality of said locks. The invention also relates to a lock with a position securing system with low technical complexity. The aim of the invention is to provide a lock with a locking mechanism comprising a rotary latch and a pawl for locking the rotary latch. The lock comprises a position securing system for a locking or anti-theft device. A spring (1, 7) is used for securing the position. Said spring (1, 7) is embodied as a dual-acting clamping spring.
