Abstract (en)  
[origin: WO2015000523A1] The present invention relates to a reciprocating hermetic compressor (1) for use in a refrigeration appliance, comprises a cylinder block (2) having a compression chamber (3), a cylinder head (4) having a suction chamber (5) and an exhaust chamber (6), each being in fluid connection with the compression chamber (3) through a valve plate (7) interposed between the cylinder block (2) and the cylinder head (4), an exhaust silencer, separately provided from the cylinder head (4), for attenuating pressure pulsation of refrigerant received from the exhaust chamber (6), a metal exhaust tube (8) for guiding the refrigerant from the exhaust chamber (6) to the exhaust silencer and a metal coupling (9) for fluidly connecting the exhaust chamber (6) with the exhaust tube (8).
