Abstract (en)

[origin: WO2015000482A1] The invention relates to a multiple clutch device for a torque transmission device (1), preferably a dual clutch transmission, for a drive train in a utility vehicle, in particular a lorry, comprising a first clutch assembly having a first clutch input and a first clutch output (28) which can be connected to a first transmission input shaft (26) and which can frictionally engage with the first input clutch by means of a first friction stack (24), and a second clutch assembly (30) with a second clutch input (38) and a second clutch output (38) which can be connected to a second transmission input shaft (36) and which can frictionally engage with the second clutch input by means of a second friction stack (34). Also disclosed are a torque transmission device, a transmission or a clutch, in particular a wet-running dual clutch transmission, for a drive train in a utility vehicle, in particular a lorry. The torque transmission device, the transmission or the clutch comprises a claimed multi-clutch device, in particular a claimed dual clutch device.
