Abstract (en)
[origin: WO2015000525A1] The present invention relates refrigeration appliance (1), comprising at least one compartment (2, 3) for refrigerating articles and a pair of supports (4) respectively formed on opposing side walls (5) of the compartment (2, 3), for supporting a shelf (6). In the refrigeration appliance (1) of the present invention, each side wall (5) is formed by a lining including a front segment (7), a rear segment (8) and an intermediate segment (9), wherein the intermediate segment (9) and the front segment (7) form a front shoulder segment (10), and wherein the rear segment (8) and the intermediate segment (9) form a rear shoulder segment (11), each support (4) includes a front groove (12) and, separately therefrom, a rear groove (13) respectively formed in the front shoulder segment (10) and the rear shoulder segment (11), for respectively receiving a front lateral section (14) and a rear lateral section (15) of the shelf (6).
