Abstract (en)  
[origin: WO2015000005A1] The invention relates to a firearm (11), comprising a component carrier (14), a barrel (15) having a cartridge chamber (3) for accommodating a cartridge (1), and a slide (17) that is supported on the component carrier (14) in a longitudinally movable manner and has a breechblock (16) for the barrel (15) and a firing device for the cartridge (1), wherein the slide (17) bears an extractor (2) for extracting a fired cartridge (1) from the cartridge chamber (3), wherein an ejector (9) is supported on the slide (17) in a longitudinally movable manner, which ejector protrudes from the side into the extraction motion path (8) of the cartridge (1) and lies against a stop (23) formed on the component carrier (14) in the end phase of the rearward motion of the slide (17), wherein the slide (17), together with the ejector (9), can be modularly replaced with a second slide having no ejector. For the second slide, said stop (23) assumes the ejector function.
