Abstract (en)
The present invention relates to a swing seat for increased capacity wherein the swing seat for a playground swing extends along a longitudinal axis and the swing seat comprises a first seat portion and a second seat portion coupled to the first seat portion. The first seat portion is a safety seat having a base portion for seating a child and a support frame for supporting a child in an upright position, and the first seat portion is arranged to swing in a general swinging direction substantially coinciding with the longitudinal axis. The second seat portion is arranged in line with the first seat portion along the longitudinal axis so that the first and second seat portions are both aligned to swing together in the general swinging direction.
