Abstract (en)

[origin: EP3018969A1] In a coordinator, the communication controller is configured to, at startup of the communication terminal, in a case where the device information is not stored in the storage, broadcast a beacon request, receive a PAN-ID of a different coordinator that is sent back from the different coordinator that has received the beacon request, and write a PAN-ID that is different from the received PAN-ID of the different coordinator into the storage, and establish wireless communication based on the PAN-ID written into the storage, and in a case where the device information is stored in the storage, establish wireless communication based on the PAN-ID stored in the storage.
