Abstract (en)
[origin: WO2015004346A1] The invention relates to a knee protection device (1) including: means (2) for being supported on the ground, wherein said means (2) for being supported on the ground are adapted to be positioned in the immediate vicinity of the knee and/or said means for being supported on the ground are adapted to be positioned at the level of the tibia; a harness (3) to be arranged at the pelvis; said harness (3) and said means (2) for being supported on the ground being connected together by a rigid branch (4) to be positioned sideways and externally relative to the thigh, wherein the equipment can move from a standing position in which the means (2) for being supported on the ground are positioned at the level of the knee and/or tibia into a kneeling position (P2) in which the means (2) for being supported on the ground are supported on the ground and are capable of transferring at least a portion of the vertical load force to the harness (3).
