Abstract (en)

[origin: WO2015003682A1] The invention relates to a conveying system for merchandise, said conveying system having a merchandise pusher stressed in a conveying direction by means of a drive device. The entire drive device is arranged in parallel or in series with a damping and/or deceleration device acting counter to the conveying direction. In the present invention, a conveying system is developed that makes it more difficult for more than one item of merchandise to be removed at a time and minimizes the risk of injury.
