Abstract (en)
[origin: US2015011489A1] Methods for safe and effective treatment of inflammatory lesions of rosacea in a subject are described. The methods involve once daily topically applying to an affected skin area a topical composition containing ivermectin and a pharmaceutically acceptable carrier. It has been demonstrated that once daily topical treatment with ivermectin is significantly superior than twice-daily topical treatment with metronidazole in reducing inflammatory lesion counts.
