Abstract (en)
[origin: WO2015005780A1] A gravity blender 1 for receiving particulate material comprises a silo 2 having a cylindrical upper portion 4 and a hollow interior 3 and a mixing chamber 8. A plurality of blending conduits 10 is provided externally of the cylindrical upper portion and extend downwards from the upper portion of the silo to communicate with the mixing chamber. A plurality of passageways 20 each extend from a respective upper outlet 22 from the hollow interior into a respective blending conduit such that the particulate material can flow from the hollow interior to the mixing chamber via the blending conduits. The blending conduits also extend upwards, beyond the respective upper outlet to a respective access location allowing access to the blending conduit for cleaning purposes.
