Abstract (en)
[origin: WO2015003199A1] The invention relates to a processing system (1) comprising a bending press (2), particularly for bending sheet-metal (3), said bending press having a stationary pressing bar (4) and a pressing bar (5) movable relative thereto, on which pressing bars (4, 5) a tool receptacle (6) is mounted or integrated, and further comprising at least one bending tool (7) having a fastening section for securing in the tool receptacle (6). Additionally at least one manipulation device (9) for handling bending tools (7) and/or metal sheets (3), or a rear stop device (8) for support in the positioning of metal sheets (3) are provided. Additionally a cleaning unit (12) that consists of a main body, on which at least one elastic stripping element is mounted, is provided. The bending tool (7) can be moved by the manipulation device (9) to the cleaning unit (12) and can be displaced along the elastic stripping element, such that at least a part of the fastening section is in contact with the elastic stripping element during the displacement.
