Abstract (en)

[origin: WO2015003755A1] The invention relates to a method for producing a flat product from an iron-based shape memory alloy, in which a melt containing at least, as a main constituents, iron, alloy elements and inevitable impurities, is cast in a casting device in order to form a cast strip which is then cooled. The aim of the invention is to provide economical methods for producing flat products from an iron-based shape memory alloy, which are rigid and can take pressure and torsion. The inventive method is described in claim 1.
