Abstract (en)
[origin: WO2015003823A1] In an apparatus (1) for spinning threads, having at least one melt feeding device, at least one spinneret pack (4) with at least one spinneret, wherein a first housing (8) with a first housing wall (3) is arranged around the spinneret pack (4), a second housing (10) with a second housing wall (6) is arranged around the first housing (8), wherein a heating space (14) filled with a gaseous heating medium is arranged between the first and the second housings (8, 10), wherein the first and the second housing walls (3, 6) bound the heating space (14), provision is made for the heating space (14) to have a housing base (28) which is formed so as to drop obliquely away from the first housing wall (3) in the direction of the second housing wall (6), such that condensate that has collected on the housing base (28) drains in the direction of the second housing wall (6).
