Abstract (en)
[origin: EP3020289A1] An electronic cigarette vaporizer, comprising a vaporizer body and a filter tip; the filter tip is a cylindrical flexible body located on the outside of one end of the vaporizer and arranged coaxially with the vaporizer; the vaporizer body and the peripheral surface of the flexible body are wrapped with a first sticker, by means of which the vaporizer body and the filter tip are tightly wrapped; the use of glue to adhesively bond the vaporizer body and the filter tip is no longer required, completely eliminating harm to the human body caused by glue; also, production of filter tips can be automated and user experience is improved. Furthermore, when the filter tip requires replacement, one need only tear off the first sticker; replacing the filter tip is convenient, and operation is both simple and convenient and cost-effective.
