Abstract (en)

Monolithic timepiece regulator (7) made in a single plate (9), comprising an external rigid element (10), an internal rigid element (11), and elastic suspensions (12) connecting the external rigid element to the internal rigid element and enabling oscillatory rotating movements between them. The internal rigid element has arms (13) which are rigidly connected with one another, leaving between each other free angular spaces (14), and the elastic suspensions are located in these free angular spaces.
