Abstract (en)

It is presented a proxy key for providing access to a locked physical space when a physical key and a reader are located at different sites. The proxy key comprises: a physical interface for interacting with the reader; a remote communication interface for electronic communication with a remote physical key; and a relay module configured to relay electronic communication between the reader and the remote physical key to thereby emulate the remote physical key in communication with the reader. A corresponding proxy reader is also presented.
