Abstract (en)  
[origin: WO2015008005A1] A bra with a reversible effect of bringing the breasts closer together. The invention concerns a bra (1) comprising two cups (2, 3) linked together by a bridge portion (4) and means (5) for adjusting the distance between the cups located at the bridge portion (4), capable of selectively reducing or increasing the distance between the cups, said adjustment means (5) comprising means for reversibly fastening the two cups together. According to the invention, said reversible fastening means comprise a first fastening element (51) and a second fastening element (52) arranged to either side of the bridge portion (4) and movable relative to each other between a coupled position in which the two cups (2, 3) are brought closer together and an uncoupled position in which the two cups are (2, 3) moved apart, under the action of pressure (F) applied manually to a side portion of the cups (2, 3) opposite the bridge, essentially in the direction of the bridge.
