Abstract (en)  
[origin: WO2015008006A1] The invention concerns a lingerie item comprising at least one holding element (3) capable of holding said lingerie item when it is being worn, said holding element (3) consisting of a textile material provided, on the inner surface (31) of same intended to come into contact with the skin, with a discontinuous coating (4) of elastomeric material capable of preventing said lingerie item from slipping. According to the invention, said discontinuous coating (4) of elastomeric material comprises a pattern of protrusions (41) of elastomeric material in the form of grains of rice having a distribution of omnidirectional orientation in the reference system of the inner surface (31) of the holding element (3), said protrusions (41) comprising dimensions and a distribution such that the density of protrusions per surface unit of the holding element (3) is at least 10 protrusions per square centimetre, and preferably between 10 and 40.
