Abstract (en)
[origin: WO2015007806A1] The invention relates to a spring clip bearing body (1) of a slatted frame, said body comprising connection means (2) for securing the bearing body (1) to the framework of the slatted frame and comprising at least one clip retainer (8) that secures the spring clip to the bearing body (1). The clip retainer (8) is arranged above the connection means (2) and a sprung element (6) is provided between the connection means (2) and the clip retainer (8) such that said retainer (8) can move back and forth in a sprung manner. According to the invention, two sprung elements (10) are provided one above the other.
