Abstract (en)  
[origin: WO2015009916A1] A combined washing and rinsing device (10) including a single arm (11) defined by an internally hollow body formed by a first (18) and by a second (19) half shell coupled to overlap each other at the part of the respective concavities (20, 21) thereof, the first half shell (18) delimiting, on the part opposite to the concavity (20) thereof, a first face (12) of the arm provided with a plurality of first, washing nozzles (13), and second, rinsing nozzles (14), and the second half shell (19) carrying integral in one piece a rotation hub (15) for the arm (11) and being provided with a double hydraulic delivery circuit (17) obtained inside the second half shell (19) by means of a longitudinal rib (22) which overhangs inside the concavity (21) of the second half shell (19) and which couples in a fluid sealing manner with the first half shell (18) to form, inside the arm, a first and a second (23, 24) chamber, which are separate from each other, into which the first and the second (13, 14) nozzles are lead, respectively.
