Abstract (en)

[origin: WO2015007458A1] The invention relates to an applicator head (3) for applying a preferably pasty medium from a container, comprising a metering chamber (5), a first housing part (30) which at least partly delimits the metering chamber (5) and which comprises an actuating element, and a second housing part (31), said first housing part (30) and second housing part (31) forming a component which can be connected to a container (2) that stores the medium and which surrounds the container (2). The medium can be transported from the container (2) into the metering chamber (5) and/or applied from the metering chamber (5) by actuating the actuating element (6), and a sealing element (40) is provided which is made of a plastically or elastically deformable plastic material, is designed such that the container (2) can be sealingly closed by the component, and is produced as a common component together with at least one other element of the applicator head. The invention further relates to dispenser for a preferably pasty medium, comprising a container (2) for storing a medium and an applicator head (3) connected to the container (2).
