Abstract (en)

[origin: WO2015007877A2] The invention relates to a vehicle lock (1) for locking doors or flaps of motor vehicles, in particular doors or flaps of agricultural machines, such as tractors, or construction machines, comprising: a rotary latch assembly (2) having two rotatably supported rotary latches (5a; b) for encompassing and retaining a striker pin (12) in a preliminary latching position or a final latching position; a pawl (6) for locking the two rotary latches (5a; b) in the preliminary latching position or final latching position thereof; and a closing device (3), to which the rotary latches (5a; b) are connected in such a way that the rotary latches can be rotatably driven in a respective rotary latch closing direction (18a; b) from the preliminary latching position to the final latching position. The invention further relates to a vehicle having such a vehicle door lock.
