Abstract (en)

[origin: WO2015007314A1] The invention relates to a method for processing slag in waste incineration plants, wherein the raw slag (4), after passing through the fire grate and before being discharged from a chamber (26) arranged downstream of the firebox (1) and preferably connected to the firebox in an air-conducting manner, is divided into at least two fractions, comprising a fine fraction (13) and a course fraction (7), in accordance with the particle size of the raw slag. According to the invention, the fine fraction (13) or a fraction separated therefrom is divided into at least two fractions, comprising a heavy fraction (18) comprising noble metals and a light fraction (17), and the heavy fraction (18) and the light fraction (17) are separately discharged from the chamber (26) arranged downstream of the firebox (1).
