Abstract (en)
[origin: EP3023027A1] A composite cosmetic container has a first sleeve (10), a driving assembly (1), multiple vessels (50) and a second sleeve (60). The driving assembly (1) is mounted in the first sleeve (10) and has a first rotating tube (20), multiple seats and a second rotating tube (40). The first rotating tube (20) is coaxially mounted in the first sleeve (10). The vessels (50) are respectively mounted in the seats. The second sleeve (60) is coaxially mounted on the second rotating tube (40). The composite cosmetic container facilitates easy control of the vessels (50) to selectively move upward and downward by the relative rotation between the first sleeve (10) and the second sleeve (60). Multiple cosmetic products are respectively contained in the vessels (50) and are easy to dispense. Accordingly, the options of the cosmetic products contained in the container are increased.
