Abstract (en)

Water discharge device including: a first member (10) including an injection port (11); a second member (20) including a streaming flow channel (23) with a streaming discharge port (21), and a shower flow channel (24) with a shower discharge port (22); and a flow channel switching mechanism. The shower flow channel (24) includes an air intake section, a storage section (24b2) of water with bubbles, a backflow prevention section, the shower discharge port (22), and a positional displacement prevention section that prevents at least a part of a projected plane, formed by projecting a downstream end of the injection port (11) in an injection direction, from being displaced outside the backflow prevention section due to an impact caused by the water injected through the injection port (11), in a state where water at a maximum flow rate is supplied into the injection port (11), and the entire projected plane passes through an inside of the backflow prevention section.
