Abstract (en)  
A mobile chip drying installation, suitable for drying a mixture of wood chips, which uses the chips themselves as fuel for drying and which comprises a hot air generator, a trommel dryer, a fine particle separator system and a control system: the control system being linked simultaneously in data communication with the hot air generator, the trommel dryer and the auxiliary fine separator system, such that the hot air flowing out of the hot air generator circulates through the inside of the trommel dryer, in which they come into contact with the wood chips, thus removing humidity, in such a way that the flow of hot air coming out of the trommel dryer circulates through the auxiliary fine separator system.
