Abstract (en)
[origin: WO2015011148A1] The invention relates to a shoe (10), an upper (12) of which is made of a three-dimensional knitted fabric (28), which at least partially comprises two knitted fabric layers connected to each other, wherein at least one of the two knitted-fabric layers of the upper is at least partially knitted by means of a rubber-elastic thread. The invention permits an especially good fit of the shoe on the foot and even a spring effect, which significantly improves the energy transfer during running. Thus, the shoe is suitable in particular as a sport shoe and running shoe.
