Abstract (en)

[origin: WO2015011402A1] The invention concerns a device (1) for contracting the knee joint of a person, with a view to carrying out an examination of said knee. The device comprises: a structure (2) intended to receive the person in a sitting or lying position, - means (4) for locking a corresponding thigh of the person relative to the structure, a foot support (5D, 5G), intended to receive a corresponding foot of the person, the foot support comprising means for locking the foot of the person, the foot support being rotatably mobile about an axis (RD, RG) intended to be positioned perpendicular to the foot of the person.
