Abstract (en)

[origin: WO2015010762A1] The invention relates to a valve arrangement for free-flowing media, in particular for hot-melt adhesive, having a basic valve body (44), with at least one distributing channel (53) for free-flowing media, and having at least two individual valves (34, 35), in particular two individual valves (34, 35) which are assigned preferably in a fixed position to the basic valve body (44). The invention is characterized in that the basic valve body (44) has at least two sub-bodies (44a, 44b) which are connected to one another and which are each assigned one of the individual valves (34, 35), wherein the sub-bodies (44a, 44b) of the basic valve body (44) can be moved relative to one another, in particular in translatable fashion, in order to alter the distance between the individual valves (34, 35).
