Abstract (en)

[origin: WO2015010804A1] The invention relates to a device for wrapping containers along a transport path, in particular a plurality of containers arranged one over the other, with a film or a film segment, wherein the device comprises a wrapping unit as a film wrapping module. The wrapping unit according to the invention has a linear transporter having a closed movement path, on which movement path movement elements circulate in a common direction, wherein at least one gripping element is arranged on each movement element.
