Abstract (en)
[origin: WO2015011074A1] Use of a single-sidedly adhesive tape as a venting tape, where the adhesive tape is adhered across an aperture in a closed body which has a higher air pressure than the surrounding space, especially in connection with the foam-in-place filling of bodies such as the sidewalls of white goods such as refrigerators, where the adhesive tape has a backing to one side of which an adhesive, more particularly a self-adhesive, has been applied, the adhesive having been applied in at least two individual strips which have a shape that deviates from a straight line.
