Abstract (en)

[origin: WO2015011381A1] The invention relates to a lighting system (10), in particular for a motor vehicle headlamp, comprising a printed circuit board (12) equipped with light-emitting diodes (14) that can produce light, and an optical module (16) having a reception surface (18) for receiving the light produced and an emission surface (19) for re-emitting the light produced. The system is characterised in that the optical module (16) comprises a housing (20) for receiving the printed circuit board (12) equipped with light-emitting diodes and in that the housing (20) has an inner wall (18) forming the above-mentioned reception surface.
