Abstract (en)
[origin: WO2015011072A1] The invention relates to a heat exchanger (1) with a base body (10) in which at least a first partial face (101) is provided with a surface modification (20) which has, in at least one spatial direction, a multiplicity of elevated portions which have a height from approximately 5 µm to approximately 50 µm and are at a distance of approximately 2 µm to approximately 10 µm from one another. The invention also relates to a heat exchanger with a base body (10) which contains a metal or an alloy, and in which at least a first partial face (101) for electromagnetic radiation with a wavelength of approximately 500 nm to approximately 2000 nm has emissions of more than 85% or more than 90% or more than 95%. The invention further relates to a method for producing and using such heat exchangers.
