Abstract (en)
[origin: WO2015010721A1] The invention relates to an automatic service machine having a display device and a device for outputting display data to the display device, wherein the display device has at least one first display region and one second display region. The device has the following features: a first input, which is configured to receive first data, a second input, which is configured to receive second data, a mixing unit, which is configured to combine the first data and the second data into an intermediate signal such that the first data is allocated to the first display region and the second data is allocated to the second display region, wherein the second display region has predefined properties which correspond to predefined properties of the second data, a graphics processing device, which is configured to process the intermediate signal and to generate a digital output video signal based on the intermediate signal, and an output which is configured to output the output video signal to the display device.
