Abstract (en)
[origin: CA2918578A1] The invention relates to a device for labelling a commercial item including two separable portions: a first portion (12) comprising an axial tip (14); a second portion including an opening for the axial insertion of the tip and means for locking the tip inserted into said opening. One of said portions, referred to as the hooking portion, includes a hooking member (32) which is capable of pivoting between a first position in which a free end of the member is spaced apart from the hooking member and a position in which the free end is arranged in a recess (50) of the hooking portion. The hooking portion is configured such that the free end (32a) of the hooking member is locked in the recess (50; 108) by the presence of the other portion of the device which is locked to the hooking portion via the tip (14) and the locking means thereof.
