Abstract (en)

The invention relates to a thin insulation sheet of mineral wool for roof structures, as well as to a method of manufacturing the thin insulation sheet. The insulation sheet comprises a core layer of mineral wool and a flexible skin provided on at least one side thereof. The core layer comprises a mineral wool sheet (1'), which is produced by longitudinal compression and in which fibers (2), during the course of longitudinal compression, strive to orient themselves mainly towards a plane defined by the sheet's major surfaces (3, 4). The core layer is provided on either side thereof with a flexible skin (5, 6) satisfying the fire class A1 of standard EN 13501-1, which is affixed to the core layer with the mineral wool sheet's own bonding agent prior to curing the mineral wool sheet.
