Abstract (en)

A transformer (100) includes: an uncut magnetic core (5) formed by winding or layering a magnetic alloy ribbon, the uncut magnetic core forming a closed magnetic path; a protector member (1) covering the magnetic core; a primary coil (2) and a secondary coil (3); and a bobbin (4) supported rotatably around the protector member, wherein the bobbin (4) includes a cylindrical portion (7) which has a circumferential surface around which the lead wire is to be wound, a pair of flanges (8) provided between which the circumferential surface is located, and a gear portion (9) provided on an outer side of the flanges so as to be spaced away from the flanges, and a wound portion of a lead wire which forms the primary coil and a wound portion of a lead wire which forms the secondary coil are arranged alternately in a radial direction of the cylindrical portion.
