Abstract (en)
[origin: WO2015017811A2] A product management display system for merchandising product on a shelf includes a divider secured to a support structure and a barrier that is moveable by rotation between a folded position and an upright position without a rotation biasing element. A product positioned in the system can contact the barrier when the product moves toward the forward end of the system and rotate the barrier from the folded position to the upright position. The system may include a rotational mounting structure to which the moveable barrier is connected. The rotational mounting structure may be removably connected to the forward end of the divider. The merchandise display system may be used in conjunction with a product tray which provides for product stored in the product tray to be slid from in the product tray into the product pocket of the merchandise display system.
