Abstract (en)
[origin: WO2015014580A1] The invention illustrates and describes a blank (1) for producing an external packaging unit, comprising: at least four regions (I, II, III, IV, V, VI) each with a rear wall (2), a base surface (3), which is assigned to the rear wall (2), and at least one inner side surface (4'), which is assigned to the rear wall (2), wherein each rear wall (2) has four sides, wherein each rear wall (2), on one of its sides, is connected, along a folding line (5), to the base surface (3) assigned to it, wherein each rear wall (2), on one of its sides, is connected, along a folding line (5) arranged along a centre axis (7), to a rear wall (2) of an adjacent region (I, II, III, IV, V, VI), wherein each rear wall (2), on at least one of its sides, is connected, along a folding line (5), to the inner side surface (4') assigned to it, and wherein the at least one inner side surface (4') of a region (I, II, III, IV, V, VI) is connected, along a folding line (5), to an inner side surface (4') of an adjacent region (I, II, III, IV, V, VI). The invention additionally illustrates and describes a method for producing an external packaging unit from such a blank (1) and also a packaging system comprising such an external packaging unit. In order to achieve the situation where the external packaging units, which can be made from the blank by folding, can be stacked reliably one upon the other, it is proposed that the inner side surfaces (4') be spaced apart from the centre axis (7), this resulting in an offset (6) between the inner side surfaces (4') and the centre axis (7).
