Abstract (en)  
[origin: WO2015015466A1] A gas cooling assembly (10) comprises a plurality of tubular ducts (20), which convey a cooling liquid within them, and a pack of mutually parallel metal sheets (30). Each sheet (30) provides, for each tubular duct (20), a through hole (31) surrounded by a collar (33), which engages a length of the duct. Each tubular duct (20) is composed of a series of modular annular elements (21) of plastic material. The annular elements (21) lock the collars (33) and are reciprocally connected by means of tubular projections (24).
